# What Do We Know About the LongTerm Impacts of Teacher Value-Added? 

Stephen W. Raudenbush
University of Chicago | Apr 2014

CARNGEGIE KNOWLEDGE NETWORK
What We Know Series:
Value -Added Methods and Applications

## Should We Use VA?

- Social Welfare
- Instructional Sensitivity
- Fairness

## From MET

- Value Added
- Classroom Observations
- Student Perceptions

## But

Does VA last ?

Does high VA predict things that matter?

## Highlights

- Two recent studies provide evidence that attending a high value-added classroom predicts college attendance and earnings.
- In one study, part of the impact of attending an effective classroom may have been attributable to small class size; in the other, part of the effect may be attributable to the effectiveness of the school.
- Teacher value-added scores "fade out" over time.

## How Big is "Initial" VA

Teacher 1
Teacher 2

Teacher 1's kids Teacher 2's kids
$70^{\text {th }}$ percentile $30^{\text {th }}$ percentile
$53^{\text {rd }}$ percentile $47^{\text {th }}$ percentile

## Long Term Impact

Chetty et al. 2011 Tennessee STAR

- Random Assignment k Teachers
- Random Assignment of teachers to small class size

Chetty et al. 2013

- 2.5 million kids in NY
- Grade 3-8

Table 1: Impacts of Value-Added on Adult Outcomes

|  | Impact of classroom <br> quality overall <br> (Chetty et al. 2011) | Impact of classroom <br> value added <br> (Chetty et al., 2011) | Impact of teacher value <br> added <br> (Chetty et al., 2013) |
| :--- | :--- | :--- | :--- |
| Initial test <br> scores | 8.8 percentiles <br> $(.32 \mathrm{sd)}$ |  |  |
| College <br> Attendance |  | $0.28 \%$ above mean of <br> $45.5 \%$ | $0.82 \%$ above mean of <br> $37.22 \%$ |
| College Quality <br> index | 0.06 sd | 0.02 sd |  |
| Earnings | $\$ 1520=8.8 \%$ <br> above mean | $\$ 1619=11.1 \%$ above <br> mean | $\$ 350=1.65 \%$ above <br> mean |
| Teen <br> parenthood |  | $0.61 \%$ below mean of <br> $14.3 \%$ |  |
| Other outcomes |  |  | Increases in <br> neighborhood quality, <br> saving with 401K |

Table 1: Impacts of Value-Added on Adult Outcomes

|  | Impact of classroom <br> quality overall <br> (Chetty et al. 2011) | Impact of classroom <br> value added <br> (Chetty et al., 2011) | Impact of teacher value <br> added <br> (Chetty et al., 2013) |
| :--- | :--- | :--- | :--- |
| Initial test <br> scores | 8.8 percentiles <br> (.32 sd) |  |  |
| College <br> Attendance |  | 0.28 percent above <br> mean of 45.5\% | $0.82 \%$ above mean of <br> $37.22 \%$ |
| College <br> Quality index | $\$ 1520=8.8 \%$ <br> above mean | $\$ 1619=11.1 \%$ <br> above mean) | $\$ 350=1.65 \%$ above <br> mean) |
| Earnings |  |  | $0.61 \%$ sd <br> $14.3 \%$ |
| Teen <br> parenthood |  | Increases in mean of <br> neighborhood quality, <br> saving with 401K |  |
| Other <br> outcomes |  |  |  |

## Table 1: Impacts of Value-Added on Adult Outcomes

|  | Impact of classroom <br> quality overall <br> (Chetty et al. 2011) | Impact of classroom <br> value added <br> (Chetty et al., 2011) | Impact of teacher value <br> added <br> (Chetty et al., 2013) |

## Questions for Future

- Why fade out?
- Skills not measured on achievement tests
- Academic
- Non-academic

## Key Caveats

## - Precision

- Partial coverage of "Social Welfare"
- Role of school as organization
